

Objectives

- Create a stunning website with easy design
- Create 3 pages with different content and colors etc....
- Using nav bar is a most

Homepage:

- Designing a homepage image with intensive work on CSS
- Adding buttons for the home page and work on the CSS and transition
- Adding a simple header and paragraph in the homepage
- Support the homepage with easy transition from one page to another
- Surprise the user or visitor with what they going to see.

Second page:

- Adding the nav bar, and link them to the pages
- Create a div for 3 images and use JavaScript to change the image every 1 or 2 Sec
- The first link will direct the user to the homepage
- The second link will direct the user top down the second page where the videos at
- The third pages it's just for additional videos that relates to the topic
- Using divs and for each div there will be a header, paragraph and and image
- Working on CSS to put the image or paragraph as absolute or relative behind the content.
- Creating a faded button to say thanks once the user hover
- Creating the navbar.

Third page:

- On top of the page there is an image and under the image there is the navbar, in case the user wanna go back to the other pages.
- Adding a basic CSS to control the width and size of the page
- In the body section the are 8 videos that been linked from youtube
- Finally adding the footer in the bottom
